

April 15, 2009

To Whom it may concern:

G.S. Wark was the General Contractor for two contracts at Bunge's Edible Oil Facilities in Hamilton, Ontario – Foundations & Sitework and Building. The value of this work was approximately \$12.7 Million and was completed in 2008.

Their work was of good quality, implemented in a timely and organized fashion. They had good control of their sub trades. Flow, quality and timeliness of their documentation was excellent. Deficiencies were relatively small and rectified properly. They handled extras and changes in a fair and sensible manner.

This was a fast-track project with many process contractors on site at the same time under the Owner's direction. They proved conscientious and reasonable in cooperating with the different contractors.

I would not hesitate to recommend them to other clients in the future.

Yours very truly,

ATKINSON ENGINEERING INC.,

M. Declan Whelan, P. Eng.
